Google Fitbit Ecosystem (Devices & Platforms)

Devices that measure continuous, real world biometric data at scale, enabling diverse research ranging from population health research to digital intervention studies.

Integrated Platforms that ensure secure and interoperable data accessibility.

Powering Health & Wellness Research

Fitbit makes conducting research easier for you and more engaging for your participants.

Pixel Phone

- Smartphone health sensors
- Surveys
- Interactions

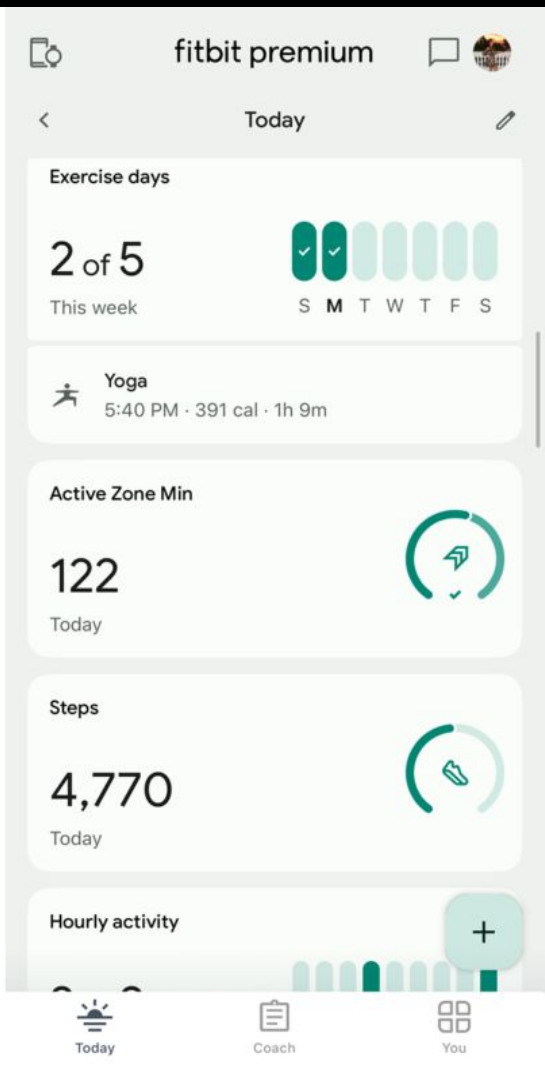

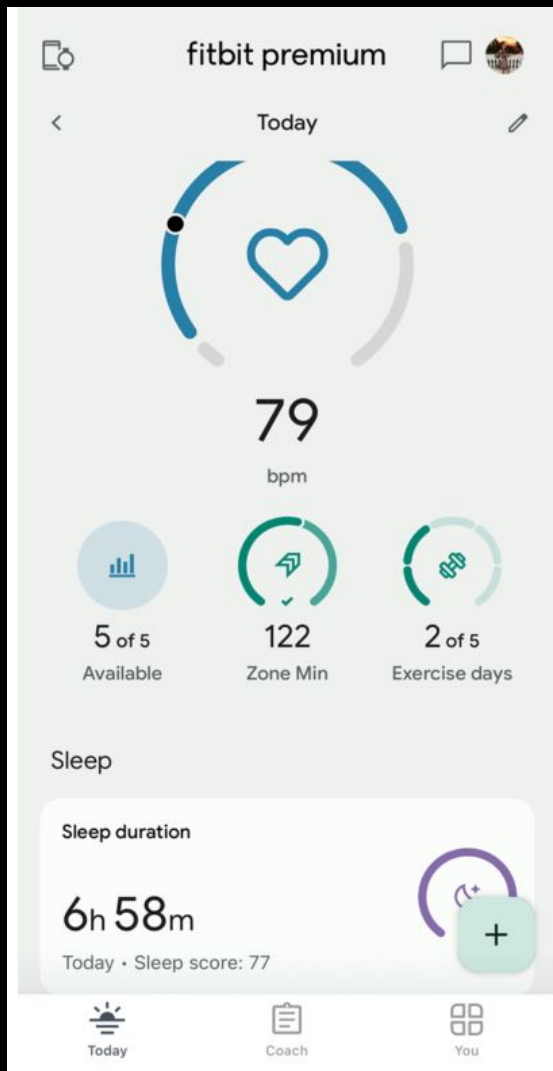

“Better together”

Metrics

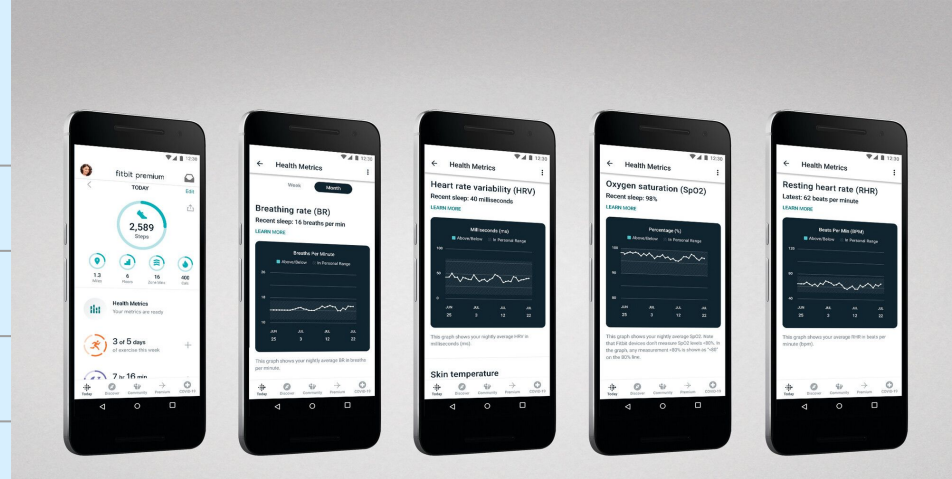

Google Fitbit devices provide a range of health metrics, largely based on movement and heart rate

Connected smartphones offer additional data collection capabilities:
“Better Together”

Metrics

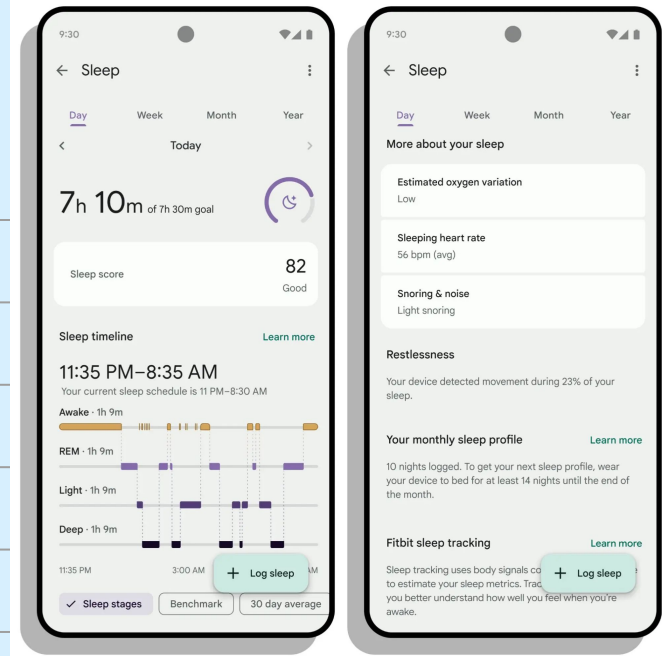

Domain	Metrics
Movement	Steps
	Floors
	Activity recognition
	Hourly activity
Heart rate	Continuous HR
	Resting HR
	HRV
	Active Zone Minutes (MVPA)
	Cardio Load (Activity: low to max intensity)

Fitbit Web API Data Dictionary

Metrics

Domain	Metric
Sleep	Score
	Duration
	Latency
	Stages
Others	Skin temp
	SpO2
	Breathing rate
	Calories burned

Fitbit Web API Data Dictionary

Data Collection

Secure, scalable and privacy-conscious data access is facilitated through API driven solutions:

- Fitbit Web API,
 - Health Connect,
 - Fitabase

Data Collection (1): The Fitbit Web API

The Fitbit Web API allows researchers/developers to access and interact with data from Fitbit Google devices and services, facilitating integration of health data into 3P applications.

*Register your Study App → Obtain User consent → Obtain Access Token →
Retrieve data → Refresh tokens → Store & analyze*

<https://enterprise.fitbit.com/researchers/faqs/#data-&-tools>

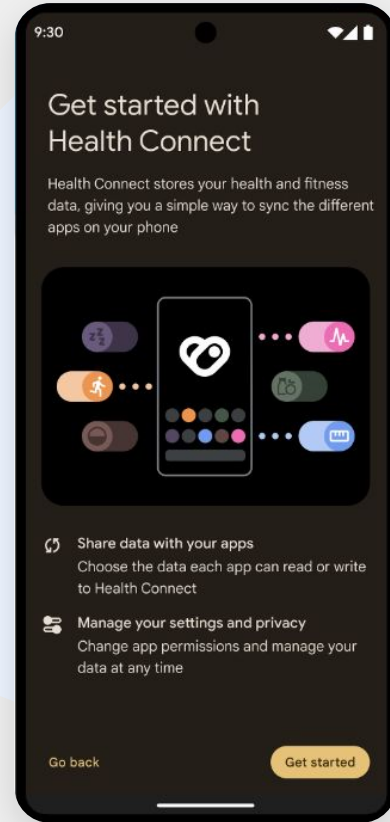

Data Collection (2): Health Connect

- On device storage of an individual's health and fitness data in one place
- 1P and 3P devices
- User centric permissions
- Consolidation across Android
- Standardised data schema
- Supported data types: Activity, Sleep, Vitals, Nutrition, Cycle tracking, Basic body measures
